THE DISCREET DRINKING LIDS:

- intuitive use: drinking from all sides is possible
- sits discreetly inside the cup
- prevents splashes and spills
- hole can be used to pinch a straw (model 814)
- suitable for many ORNAMIN mugs

CUP WITH NON-SLIP FUNCTION:

- appealing flower design with innovative non-slip effect enables secure grip
- space-saving stackable
- combinable with various drinking lids

THE PLATE WITH SLOPED BASE:

- food gets easier onto the spoon or fork due to:
 - a sloped base
 - a discreet overhang
 - a non-slip ring under the bottom which provides firm stand
- available in three sizes (model 921, 902, 903)

PREVENT MALNUTRITION WITH ACTIVATING CARE

In the UK, there are more than 15.5 million people aged 60+. This makes up 23% of the population. Around **40% of those people aged 60+ have a long-term illness or disability**. Keeping this in mind, **malnutrition** is becoming a common problem. Many elderly people experience **significant weight loss**. Many effected **people are in need of nutrition help** that is why **nutrition is one of the core tasks of care!** Nurses, care givers and care staff have a major impact on residents' eating habits, so does the correct tableware in use.
(<https://www.mha.org.uk>, 09.11.2020)

The serious consequences of malnutrition are:

- increasing physical weakness (e.g. mobility problems, such as increased risk of falls, broken bones, increased risk of pressure sores, increase in susceptibility to infection)
- chewing and swallowing disorders
- increased decline in mental abilities (depression and listlessness)
- various secondary illnesses etc.

The consequence: the need for care increases

The aim of the CQC inspection is to determine, improve and back up the quality of care. ORNAMIN supports you in meeting and increasing the quality inspection guidelines of the CQC (KLOES) as tableware for care institutions is subject to special requirements.

The CQC standard for nutrition is implemented and followed

The functional tableware from **ORNAMIN compensates age or illness related disabilities while independent eating and drinking - without stigmatising**. You can't tell by looking at the crockery that they are specific aids. The supporting functions are cleverly hidden in the design in order to maintain self-esteem and joy for people living with a disability. The tableware for care and kitchen staff is required to be easy to carry and should be sturdy. Fewer breaks means long durability and less need for replacements.

This is how the Ornamin tableware supports you in fulfilling the 5 CQC rating characteristics (KLOES)

Caring

(C2+C3) An appealing dining environment and **table setting have been shown to have a positive effect on eating behaviour**. Especially with people living with dementia changes are made through a table community security and orientation. Since the supportive crockery by **ORNAMIN is not an obvious aid, nobody at the table feels exposed or excluded**.
(C3) By receiving a chance as a resident to actively preparing meals the desire to eat is being awakened. The **joint preparation of meals can increase the quality of life**, because for many people participating in cooking is a part of ,normality'.

Safe

(S1+S2) ORNAMIN tableware is **none stigmatising due to its design** with the help of therapists, nursing staff and doctors. The discreet **dishes prevent discrimination**. Common crockery made of porcelain or glass break quickly and cause a higher risk of injury. This won't happen with the ORNAMIN range, due to its **high-quality, sustainable and durable material which is more break resistant** (BPA-free).

Well-led

(W1) **Eating together is an important social event and one of life's simple daily pleasures** – provided everyone can participate and enjoy their food. The award-winning tableware by ORNAMIN has been designed with style as well as function, **removing any stigma or embarrassment about using adaptive crockery because its supportive features are hidden in its design**.

Responsive

(R1) Staff and individual carers receive the **necessary knowledge and skills through a personal product training** carried out by ORNAMIN. Every carer can apply the ORNAMIN dishes precisely to the needs of each individual resident. **This means that personalised care can be guaranteed!**

Effective

(E1) Depending on the disability, ORNAMIN offers various aids that encourage independency and **thus prevent malnutrition**.
(E3) The **hidden features support an intuitive way of drinking and eating and support people's freedom**. They are being empowered and giving them self-esteem.
(E2+E5) The special ORNAMIN aids have been developed to not only strengthen people in need of care **but also to relieve personnel in order to use this time for further person centred support**.

Conclusion

Use the existing resources of the residents and promote it: **"The aim of care is often not healing but support in everyday activities. Despite possible health impairments or permanent disabilities, residents should maintain or regain a high degree of independence and personal freedom."**
(Siegfried Huhn (2009): Practical Guide to Nutrition Management, p. 25).

The **ORNAMIN expert trainings** address everyone who is interested in specific topics dealing with independent eating and drinking or want to be instructed on the products by ORNAMIN. **For further information, please get in touch**.
